1 GAUSSIAN and ITS FOURIER TRANSFORM

1.1 Standard normal

Standard normal curve is

$$f(t) = \frac{1}{\sqrt{2\pi}} e^{-t^2/2}$$

```
1 import matplotlib.pyplot as plt
2 import numpy as np
3 plt.style.use("classic")
4
5 def f(t):
6     return np.exp(-(t)**2/2)/(np.sqrt(2*np.pi))
7
8 xv = np.linspace(-7,7,1000)
9 yv = f(xv)
10
11 plt.plot(xv, yv, lw=1)
12 plt.xlabel("$t$")
13 plt.ylabel("$f(t)$")
14 plt.grid(True)
```

Figure 1: Standard Normal curve

1.2 Fourier transform of Standard normal

If $f(t) = \int_{-\infty}^{\infty} g(\omega) e^{i\omega t} d\omega$, then fourier transform of that is $g(\omega) = \frac{1}{2\pi} \int_{-\infty}^{\infty} f(t) e^{-i\omega t} dt$. Here,
 $f(t) = \frac{1}{\sqrt{2\pi}} e^{-t^2/2}$

$$\begin{aligned} g(\omega) &= \frac{1}{2\pi} \int_{-\infty}^{\infty} f(t) e^{-i\omega t} dt \\ &= \frac{1}{2\pi} \int_{-\infty}^{\infty} f(t) \cos(\omega t) dt - i \frac{1}{2\pi} \int_{-\infty}^{\infty} f(t) \sin(\omega t) dt \end{aligned}$$

```

4
5 def f(t):
6     return np.exp(-(t)**2/2)/(np.sqrt(2*np.pi))
